TECHNICAL SKILLS

React.js	90%
Node.js / Express	85%
MSSQL / MySQL	82%
Python	70%
AWS Cloud	68%
REST APIs / Postman	88%

TOOLS & PLATFORMS

- PowerBI
- AWS Console
- Git & GitHub
- VS Code
- Postman

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Microsoft Certified: Power BI Data Analyst Associate
- Object-Oriented Programming with Java - Coursera
- Soft Skills for Business Negotiations and Marketing Strategies - NPTEL

LANGUAGES

English	**Fluent**
Tamil	**Native**

EDUCATION

M.C.A – Master of Computer Applications
Anna University
2023 – 2025 | CGPA: 7.0

B.Sc (CT) – Computer Technology
Bharathiar University
2020 – 2023 | CGPA: 7.8

INTERESTS

- Cloud Architecture
- System Design
- CI/CD
- Database Optimization

PROFESSIONAL SUMMARY

Full-Stack Developer with a year of professional experience building production-grade web and Android applications. Delivered a workforce management platform for a 500+ employee factory, a chit fund platform handling real financial transaction records, and a live Android app on the Play Store. Strong in React, Node.js, and SQL — with hands-on deployment experience on Windows Server (IIS/iisnode) and AWS.

WORK EXPERIENCE

Software Developer — 2025 – Present

MaDuSOFT Solutions — Tamil Nadu

- Developed and maintained **MAAST (Manpower, Allotment, Attendance, Skill Tracking)** — full-stack workforce & production management system serving daily active users.
- Built RESTful APIs with Node.js/Express on MSSQL; React dashboards with real-time attendance tracking, shift reports, Excel export, RBAC, and multi-stage approval workflows.
- Reduced report load time by 35% via API response caching and SQL query optimization.

KEY PROJECTS

MAAST – Workforce & Attendance Management System

React · Node.js · MSSQL · IIS · iisnode · ExcelJS

Full-stack manpower tracking system for 500+ factory workers — built entirely solo from DB schema to Windows Server deployment in 6 months.

- Designed a 15-table schema isolating ERP read-only biometric tables; attendance engine uses multi-CTE SQL (up to 6 nested CTEs) to classify raw punches into shifts (incl. overnight) with ±45-min grace window and mid-shift swap support.
- Excel upload pipeline validates rows against DB, deduplicates (last row wins per user+date), upserts in batches of 50, returns per-row failure reasons for easy re-upload.
- Delivered 18 React components (attendance board, skill matrix, punch timeline, ExcelJS templates); deployed via IIS + iisnode with URL rewriting and Windows Auth via msnodesqlv8.

Vasantham Crackers – Chit Fund Management Platform

React (Vite) · Node.js · Express · MSSQL · JWT · Helmet.js · Ant Design

Full-stack chit fund platform replacing manual Excel ledgers — manages member cycles, automated monthly dues, and delivery logistics for a seasonal crackers business.

- Designed 8-table relational schema; mid-project refactored customer-scheme linking into a many-to-many Scheme_Members table when single-scheme linking broke for customers buying multiple tickets.
- Custom due-calculation engine auto-generates monthly payment schedules on enrollment; handles partial payments — e.g. ₹1,500 across two ₹1,000 dues splits the receipt and leaves a ₹500 forward balance recorded automatically.
- JWT stateless auth, Admin/Staff RBAC, Helmet.js header hardening; logistics dashboard maps mature funds to transporters and delivery branches; Ant Design frontend with dense tables searchable by name or phone.

TagDial – Android Call Tagging & Recording App

Kotlin · Android · CallScreeningService · MediaProjection · AdMob · Firebase

Android app that overlays a floating bubble on every call to tag it in real time — live on the Google Play Store; v5 added in-call recording via the MediaProjection API.

- `SYSTEM_ALERT_WINDOW` foreground-service overlay fixed across Android API 29–35 (tested at levels 31 and 34 where background service restrictions changed); `CallScreeningService` (holding `ROLE_CALL_SCREENING`) fires before the dialer appears — not a polling hack.
- Call recording via transparent `ProjectionPermissionActivity` managing MediaProjection consent — required full architecture rewrite in v5 since Android 10+ blocks direct mic access from background services.
- SharedPreferences chosen over Room for the tag store (phone → tag) — zero-latency live-call reads; AdMob (Android 13+ `AD_ID` compliant), Firebase Analytics, Material 3 dark/light theme.
